

Marcin Sikorski
**User-System Interaction Design
in IT Projects**
Published by
Gdansk University of Technology, Gdansk 2012
ISBN 978-83-62197-72-9

Table of Contents

Preface	7
1. Introduction to interaction design	9
1.1. Human-Computer Interaction in IT projects	9
1.2. Quality, ergonomics and usability of IT systems	10
1.3. Generic model of human-computer interaction	11
1.4. General methodology of interaction design	11
2. User characteristics	13
2.1. Generic model of user's control behaviour	13
2.2. Human information processing	14
2.2.1. Human Information Processor (HIP) model	15
2.2.2. Perception and senses	15
2.2.3. Types of human memory	17
2.3. Learning process and mental models	18
2.4. Human motoric activity	19
2.4.1. KLM model	19
2.4.1. Fitts' law	20
2.5. Human errors	22
2.6. Emotions and feelings	23
2.7. Recommendations for interaction design	24
2.7.1. Human limitations in the design process	24
2.7.2. Multi-aspect view of human behaviour	25
3. GUI – design guidelines	26
3.1. Guidelines and standards for software quality	26
3.2. Guidelines for interaction design	27
3.2.1. Usability heuristics	27
3.2.2. Additional guidelines	30
3.3. Evaluation of user interfaces	32
3.3.1. Heuristic expert evaluation	32
3.3.2. Inspections, reviews and checklists	33
4. GUI – user-system dialogue techniques	34
4.1. Evolution of user interfaces	34
4.2. Realization of user-system dialogue	35

4.2.1. Graphical user interface GUI	35
4.2.2. User-system dialogue techniques	36
4.3. User interface standards, styleguides and widgets	41
4.4. New techniques of user-system interaction	43
5. Web user interface – design guidelines	47
5.1. Interaction design for the Web	47
5.1.1. Web sites and Web terminology	47
5.1.2. Specificity of user interaction with Web services	48
5.2. Guidelines, requirements and standards	51
5.3. Web user interface evaluation	55
5.3.1. Heuristic expert evaluation	55
5.3.2. Inspections, reviews, and checklists	56
6. Web user interface – realization methods	57
6.1. Website design methodology	57
6.2. Selected issues of Web interface design	57
6.2.1. Web page layout	57
6.2.2. Use of graphics	59
6.2.3. Text and typography	61
6.2.4. Navigation	61
6.2.5. Interactivity	63
6.2.6. Professionalism and credibility	63
6.2.7. Accessibility for the visually impaired users	65
6.3. Trends and innovations in Web interface development	66
7. UCD – capturing user requirements	67
7.1. Principles of engineering design	67
7.2. Software lifecycle models	68
7.2.1. Sequential model (waterfall)	68
7.2.2. Spiral model	68
7.2.3. Extreme Programming (XP) model.....	69
7.3. User-Centred Design (UCD) approach.....	69
7.4. Identifying requirements	72
7.4.1. Types of requirements	72
7.4.2. Acquiring requirements	73
7.4.3. Requirements specification	74
7.4.4. Problems with managing requirements	75
8. UCD – analysing the context of use.....	77
8.1. Purpose and scope of the context of use analysis.....	77
8.1.1. Describing user characteristics	78
8.1.2. Describing user tasks	78
8.1.3. Describing environmental conditions	79
8.2. Data acquisition for specifying requirements.....	79
8.2.1. Data acquisition techniques	79
8.2.2. Difficulties in obtaining data from users	81
9. UCD – conceptual design	83
9.1. Iterative design cycle	83
9.2. The product concept and development plan	84

9.3. The process of interaction design	84
9.3.1. Preparatory work and selection of design standards	85
9.3.2. General concept of interaction	85
9.3.3. Describing users	86
9.3.4. User interface design and modelling	86
9.4. Collaboration with users	87
9.4.1. User profiles – “Persona”	87
9.4.2. Freehand sketches	88
9.4.3. Mind mapping	89
9.4.4. Card sorting	90
9.4.5. User workshops	91
10. UCD – prototyping	93
10.1. User interface prototyping methodology	93
10.1.1. UCD prototyping approach	93
10.1.2. Types of user interface prototypes	94
10.1.3. Advantages and disadvantages of prototyping	95
10.2. Low-fidelity prototypes	95
10.2.1. Freehand sketches	95
10.2.2. Wireframe prototypes	96
10.2.3. Sequential prototypes (“storyboards”)	97
10.2.4. Paper prototypes	97
10.3. High-fidelity prototypes	98
10.3.1. Characteristics of on-screen prototypes	98
10.3.2. Software tools for building on-screen prototypes	99
10.4. Collaboration with users during the prototyping	101
10.4.1. Cognitive walkthrough	101
10.4.2. “Wizard of Oz” method	101
10.4.3. Presentation of the prototype of a group of users	102
10.4.4. Usability testing	103
11. UCD – testing and evaluation	104
11.1. The role of testing and evaluation in the UCD approach	104
11.2. Expert evaluation	105
11.2.1. Heuristic evaluation	105
11.2.2. Inspection-based evaluation	105
11.3. Evaluation with users	105
11.3.1. Evaluation by observation	106
11.3.2. Usability tests	106
12. UCD – gathering data from users	109
12.1. Gathering data from users	109
12.2. Heuristic evaluation with experts	109
12.3. Evaluation with users	111
12.3.1. Preparation and organization of usability testing	111
12.3.2. Selected techniques for data recording	114
12.3.3. Survey data collection method	116
13. UCD – reporting usability evaluation results	120
13.1. Reports from evaluation and testing	120
13.1.1. The CIF Standard	121

13.1.2. Expert evaluation reports	121
13.1.3. Survey research results	122
13.1.4. Usability test reports	122
13.2. Presenting evaluation results	123
13.2.1. Text reports	123
13.2.2. PowerPoint presentations	123
13.2.3. Video presentations	123
13.2.4. Evaluation reports in the corporate Intranet	124
Summary	125
References	126

Cover note:

Prof. Marcin Sikorski is an associate professor at the Gdansk Technical University, Faculty of Management and Economics. He is the Head of Ergonomics Department, which conducts research on ergonomics and usability of business software, websites and on-line services.

Prof. Marcin Sikorski has published over 60 papers on various topics related to human factors in computer systems, usability engineering and user-system interaction design.

This book presents a concise review of methods applicable for user-system interaction design in IT projects, presented from viewpoints of quality management and user-centred design. The contents of this book are addressed mainly to the international audience of human-computer interaction researchers, students and practitioners involved in all kinds of IT projects where user-system interaction becomes an important factor affecting system quality, usability and user experience.
